# Welcome to Virginia!

There are 66 public-use airports across the Commonwealth that are very accommodating to your business and recreational travel needs. They offer a safe and efficient means of transportation and stimulate economic growth and development.

Virginia is home to Jamestown, the first permanent English settlement in North America, plus Colonial Williamsburg, Yorktown and many other historic destinations. These treasures are among the most popular destinations, but Virginia offers so much more. Discover breathtaking mountains, scenic beaches, charming small towns, award-winning wineries and world-class accommodations. We welcome visitors and urge Virginians to enjoy the destinations that are in their own backyard. Our history, arts and culture, beautiful mountains and beaches, and other attractions offer relaxation, family fun and learning opportunities. Wherever you find yourself - in a garden, at an art museum, performance hall or theme park - you might discover something that sparks a life-long interest.

Did you know that the first peanuts grown in the United States were grown in Virginia? Our proud state has been the first at many things, especially in aviation. Virginia is the first state to have all public-use airports equipped with Instrument approaches and all public-owned, public-use airports equipped with weather reporting systems\*. The Virginia Department of Aviation is also the first state aviation agency to be ISO 9000 and IS-BAO\*\*certified.

We strive to be the best and take pride in all the wonders that Virginia has to offer, so come see for yourself why we say "Virginia is for Lovers."

*\*Grundy Municipal Airport - Airport development temporarily suspended due to the consideration of constructing a new airport*

*\*\*International Standard for Business Aircraft Operations*

- **Bluegrass Barbecue and Brew Festival at Red Hill**

[bluegrassbarbecuebrew.com](http://bluegrassbarbecuebrew.com)

This festival combines a love of history with a love of music, barbecue and Virginia craft

beer! The Bluegrass, Barbecue & Brew Festival brings together the lifestyle of yesteryear with modern leisurely activities. Our intention is for the people to fall in love with Southern Virginia and all of the history, culture, food, beer and music it has to offer. Typically held in the first week of November.

- **Uncle Billy's Day**

[www.unclebillysdayfestival.com](http://www.unclebillysdayfestival.com)

The first weekend in June was established to celebrate the Trade Lot. Uncle Billy's Day started in 1949 as a one-day event to commemorate the founding of the Trade Lot where local residents brought their vegetables and livestock to sell. Over the years it has grown into a two-day festival including the Trade Lot, crafts, food vendors, live music, car shows, and fireworks.

### • Crewe Railroad Museum

The Crewe railroad Museum is a not-for-profit memorial to the many residents of Crewe and the surrounding areas that

lived here and were employed by the N&W Railroad. The building houses many artifacts, photos, and memorabilia, the majority of which has been donated by the residents of Crewe. Outside, in a park like surrounding, there is a steam locomotive, diesel locomotive, several freight cars, a caboose, and the latest acquisition, a passenger coach that was used on the N&W Powhatan Arrow passenger trains of the Nineteen-Forties and Fifties.

### • High Bridge Trail State Park

High Bridge Trail is 31 miles long and ideally suited for hiking, bicycling and horseback riding. Once a rail bed, the trail is wide, level and generally flat. The trail's finely crushed

limestone surface and dimensions make it easy for everyone to enjoy. The park's centerpiece is the majestic High Bridge, which is more than 2,400 feet long and 125 feet above the Appomattox River. It is the longest recreational bridge in Virginia and among the longest in the United States. High Bridge is a Virginia Historic Landmark and on the National Register of Historic Places. High Bridge Trail is designated a National Recreation Trail recognizing exemplary trails of local and regional significance, connecting people to nature, to each other, and to our shared histories and cultures. Bring plenty of drinking water because it's not available on the trail.

## Attractions

- Village View Mansion House**  
 221 Briggs St  
 Emporia, VA 23847  
 804-634-2475

The house was built in the 1790s for James Wall, and has been home to the Wall, Land and Briggs families. During the Civil War, the front parlor of the house served as the site of a council of war for Generals W.H.F. Lee, Wade Hampton and Matthew Butler. In the late 19th century, rooms in the house, as well as dependencies, served as a doctor's office, a dentist's office, an apothecary and a boys academy. Today the restored house, with its collection of historic furnishings, reflects the rural family life of Southside Virginia in the 1830s.

## Attractions

Tangier is a remote island accessible by air or sea, 12 miles out in the Chesapeake Bay. Visit the "soft crab capital" of the nation and feel welcome by the locals who take much pride in their lifestyle. See the narrow streets, traveled mostly by bicycles and golf carts, the unspoiled beach, quaint gift shops and ice cream shops. Enjoy fine dining with their fresh caught seafood.

### • Tangier History Museum and Interpretive Cultural Center

[www.tangierisland-va.com/history](http://www.tangierisland-va.com/history)  
Come learn

about the history of Tangier and its people.

THMICC has a museum/visitors center, a walking history trail, a nature trail and water trails, with free use of kayaks and canoes. Come and learn about Tangier's special role in the history of aviation, our unique language and how we face the challenges of a rising Bay, a shrinking island and a dwindling population. Learn about how the British forces used Tangier as a base during the War of 1812, how Billy Mitchell proved airplanes could sink ships, and how a small island creates its own recreation and amusement.

## Private Airports in Virginia

---

The list of Virginia's private airports on the following pages is provided for informational purposes only. A private airport is to be used by the owner only, or by the owner and persons authorized by the owner. If the airport owner has given the Department of Aviation permission to list contact information, pilots may contact them to request authorization to use the airport.

### **Virginia Administrative Code regarding Private or Personal Airports**

#### **24VAC5-20-170. Private or personal airports.**

Any person owning property utilized for landing aircraft that is solely for private or personal use, and which is not open to the general public, shall be required only to register the landing area if it is not within five nautical miles of a licensed public-use airport. Registration shall be accomplished on forms provided by the department.

Any person establishing private or personal airports within five nautical miles of a licensed public-use airport shall be licensed if the applicant airport does not pose a hazard to the airspace and utilization by aircraft of the licensed public-use airport in question. Licenses for private-use airports that are within five nautical miles of a licensed public-use airport shall be issued once, and do not have to be renewed.

Prior to final registration or licensing of a private or personal airport, the applicant airport shall provide to the department written information from the local government having jurisdiction over such airport that such airport has received approval from the locality with respect to zoning, special use permit, or any other land use requirements.

Aircraft landing at these landing areas and nonpublic-use airports shall have prior approval of the landowners or controlling agency when reasonably practical. Aircraft landing at other than licensed airports without such prior approval shall not be removed therefrom without the consent of the owner or lessee of such property.

# Best Practices for Airfield Safety

---

The best practices were developed by FAA staff to help pilots improve safety by giving guidelines that should be followed to keep skills and focus current and vigilant. Remember: over 80% of pilot- caused runway incursions occur during taxi to the departure runway.

## **PRE-FLIGHT PLANNING:**

1. Review and understand airfield signage and markings.
2. Review the appropriate airport diagrams. Review any Hot Spots identified on the diagram. Print a copy for use in the cockpit.
3. Review airfield NOTAMS and current ATIS for any taxiway closures, runway closures, construction activity, or other airfield specific risks.
4. Brief any passengers on the importance to minimize discussions, questions, and conversation during taxi (maintain a “sterile cockpit”).

## **TAXI:**

5. Have the airport diagram out and available for immediate reference during taxi.
6. Review current ATIS for any taxiway closures, runway closures, construction activity, or other airfield specific risks.
7. During radio transmissions, use correct terminology and proper voice cadence.
8. Copy the taxi clearance and use the airport diagram to review the taxi route to the assigned runway prior to releasing brakes and beginning taxi.
9. Eliminate distractions while taxiing in the operational area.
10. Focus attention and have your “eyes out” of the cockpit when taxiing.
11. Maintain appropriate taxi speed.
12. Be alert to similar call signs operating on the field.
13. STOP aircraft on the taxiway and request ATC clarification if there is confusion regarding aircraft position or ATC taxi clearance.
14. Prior to crossing any runway during taxi, ensure you have a clearance to cross. Visually check to ensure there is no conflicting traffic prior to crossing the runway.
15. If there is any doubt that the runway is clear, reconfirm crossing clearance with ATC.
16. Be aware that hold short lines can be as far as 400’ from the runway due to new Precision Obstacle Free Zone (POFZ) requirements.
17. Maintain a “sterile cockpit” when taxiing.

## **TAKE-OFF**

18. If cleared to “line up and wait”, turn on all exterior lights except take-off/landing lights. If you have been holding in position on the runway for more than 90 seconds, or upon seeing a potential conflict, contact the tower.
19. When “cleared for takeoff”, turn on all exterior lights, including take-off/landing lights.
20. Note that if you see an aircraft in take-off position on a runway with take-off/landing lights ON, that aircraft has most likely received its take-off clearance and will be departing immediately.
21. When assigned a departure at an intersection versus a full length takeoff, state “intersection departure” at the end of the take-off clearance readback.
22. Conduct “Clearing Turns” to check all areas prior to entering ANY runway.

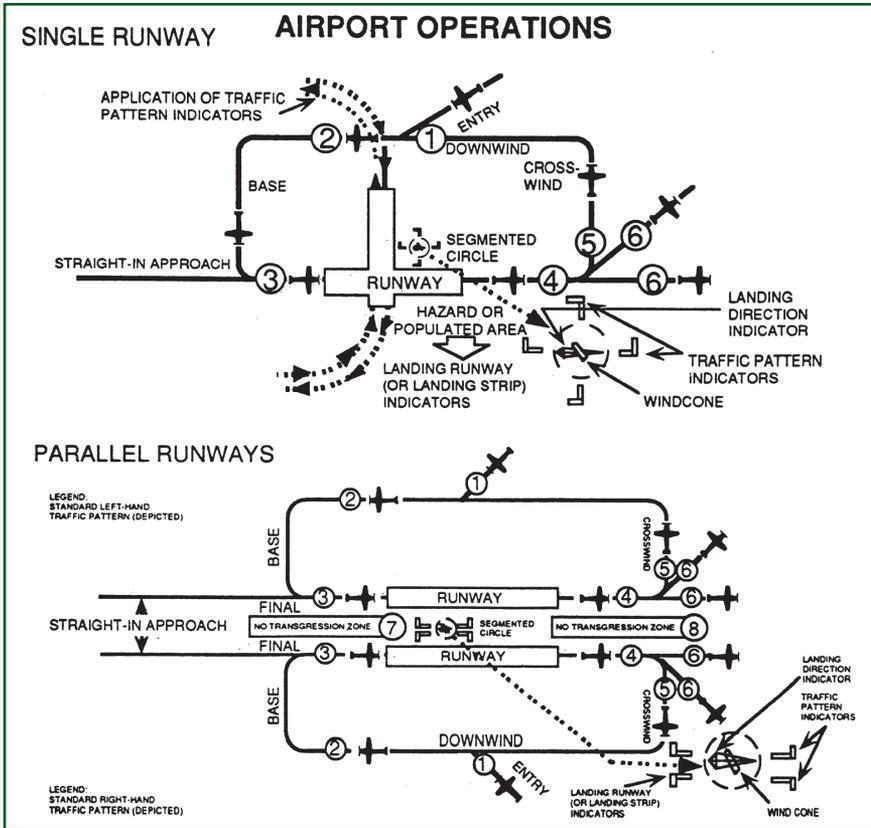

## **LANDING**

23. Wait until you have exited the active runway and you are sure of your taxi clearance prior to beginning an after-landing checklist
24. Follow the same TAXI Best Practices above.

## **REMEMBER: WHEN IN DOUBT, ASK!**

# Operations at Airports Without Operating Control Towers

**KEY:**

1. Enter pattern in level flight, abeam the midpoint of the runway, at pattern altitude. (1000 AGL is recommended pattern altitude unless established otherwise).
2. Maintain pattern altitude until abeam approach end of the landing runway, or downwind leg.
3. Complete turn to final at least 1/4 mile from the runway.
4. Continue straight ahead until beyond departure end of runway.
5. If remaining in the traffic pattern, commence turn to crosswind leg beyond the departure end of the runway, within 300 feet of pattern altitude.
6. If departing the traffic pattern, continue straight out, or exit with a 45 degree left turn beyond the departure end of the runway, after reaching pattern altitude.
7. Do not overshoot final or continue on a track which will penetrate the final approach of the parallel runway.
8. Do not continue on a track which will penetrate the departure path of the parallel runway.

# Washington DC SFRA Standard Requirements

## Requirements to operate to/from, or within the DC SFRA

1. Two-way radio
2. Operating transponder with altitude reporting (Mode C)
3. Flight plan appropriate to intended operation:
  - IFR: IFR flight plan
  - VFR: DC SFRA flight plan for all operations, except:
    - JYO ingress/egress on 1227/1226 (*no flight plan required*)
    - Fringe airport egress (*no flight plan required*)
    - Towered airport pattern work (*make request to tower*)
4. Discrete transponder code for all operations, *except*:
  - Leesburg (JYO) ingress or egress (1226)
  - Fringe airport egress (1205)
  - Towered airport pattern work (1234)
5. VFR speed restriction ( $\leq 180$  KIAS in DC SFRA, &  $\leq 230$  KIAS from 30 NM - 60 NM from DCA VOR/DME unless otherwise authorized.)
6. Communication with ATC for all operations, *except*:
  - Leesburg (JYO) ingress/egress: make CTAF calls
  - Fringe airport egress: monitor guard if able
  - Towered airport pattern work: talk to tower
  - Non-towered airport pattern work:
    - Make CTAF calls & monitor 121.5 if able

**Activating:** A DC SFRA flight plan to enter/exit the DC SFRA VFR is activated when the pilot obtains a discrete transponder code *except*:

- Towered airport pattern: with squawk & talk
- Non-towered airport pattern: with CTAF calls

**Closing:** The DC SFRA flight plan closes when the aircraft exits or lands at an airport inside the DC SFRA. For pattern operations at non-towered airports or when tower is not open, close by calling ATC on landing at 540-351-6129.

# Washington DC SFRA Special Terms & Procedures

## Procedures for Traffic Pattern Work:

**Towered Airport:** Request pattern work from tower; squawk 1234, remain in two-way communication with tower. If tower is closed, see below.

**Non-Towered Airport:** File DC SFRA flight plan; obtain and squawk discrete transponder code, communicate pattern position via published CTAF, and have ability to monitor VHF guard on 121.5 or UHF guard on 243.0. Upon terminating pattern operations, call ATC via telephone at 540-351-6129 to close flight plan.

## ATC Terms Specific to the DC SFRA:

**Security services:** Identification, communications and security tracking provided by an ATC facility in support of DOD, or other security elements. *NOTE: Security services do not include basic radar services or any other ATC services.*

**Transponder observed:** Used to inform a pilot that the aircraft's assigned beacon code and position has been observed. This transmission does *not* imply ATC services. It conveys only that the transponder reply has been observed and its position correlated for movement through security airspace.

**Remain on the code until you land:** Used when Potomac hands an inbound VFR flight off to the tower or authorizes change to advisory frequency for non-towered airports. It reminds pilots to remain on the assigned discrete transponder code until after landing. *NEVER squawk 1200 inside the DC SFRA.*

## Emergency Procedures:

**Transponder failure:** An aircraft unable to transmit the ATC-assigned transponder code must contact ATC and comply with all instructions. If unable to contact ATC, the aircraft must exit the DC SFRA by the most direct lateral route.

**Communications failure:** Squawk 7600 and exit SFRA via most direct route or, if closer to departure point than SFRA boundary, return to departure point.

**Intercepts:** Review interception procedures in the AIM. If you are intercepted, follow all instructions given by the intercepting aircraft. Monitor 121.5, provide call sign/position, and squawk 7700 unless otherwise directed.

# Washington DC SFRA VFR Inbound Procedures\*

## Step 1: Preflight – File a DC SFRA Flight Plan

- ALWAYS review NOTAMs for current TFR information.
- File DC SFRA flight.  
**“I would like to file a DC SFRA flight plan for VFR flight from (appropriate entry gate) to (destination airport).”**

## Step 2: Before Entry – Activate DC SFRA Flight Plan

- Before entry, call Potomac to request transponder code.  
**“Potomac Approach, (call sign), VFR inbound to Gaithersburg.”**
- Set assigned code and verify that Mode C (ALT) is on.
- Continue inbound unless otherwise instructed.
- Remain out of Class B unless explicitly cleared to enter.

## Step 3: After Entry – Communicate w/ ATC

- Monitor Potomac TRACON.
- Remain out of Class B airspace unless explicitly cleared to enter.

## Step 4: Arriving – Close DC SFRA Flight Plan

- Change to tower/advisory frequency when so instructed.
- Remain on assigned transponder code until you land.
- DC SFRA flight plan closes upon landing.

# Washington DC SFRA

## VFR Outbound Procedures

### Step 1: Preflight – File a DC SFRA Flight Plan

- ALWAYS review NOTAMS for current TFR information.
- File DC SFRA flight plan.
  - “I would like to file a DC SFRA flight plan for VFR flight from (departure airport) to (appropriate exit gate)”
- If desired, file separate VFR flight plan (search-and-rescue) to be activated after exiting the DC SFRA.

### Step 2: Pre-Takeoff – Activate DC SFRA Flight Plan

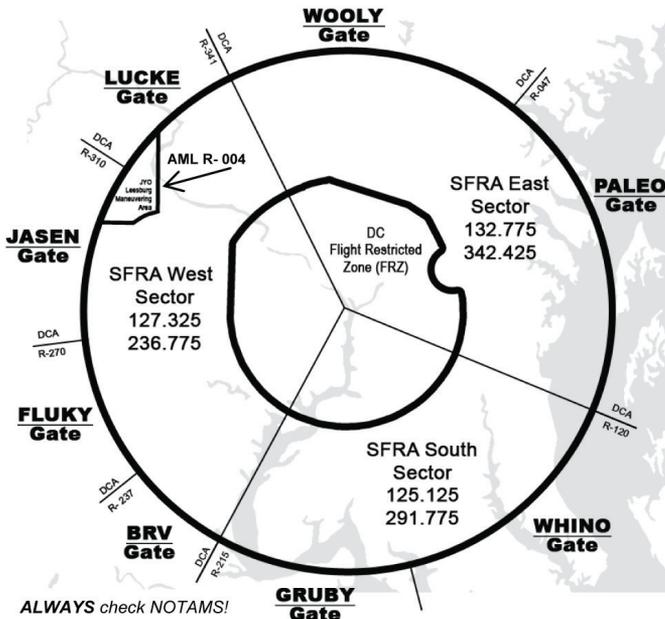

- Call ATC (tower, RCO, phone) for frequency & squawk.
  - “Potomac Clearance, (call sign) at Tipton, VFR departure.”
- Set assigned frequency & transponder code.
- Verify that Mode C (ALT) is on.

### Step 3: After Takeoff – Communicate w/ ATC

- Establish radio contact with Potomac TRACON.
  - “Potomac Departure, (call sign), off Tipton”
- Monitor assigned frequency.
- Remain out of Class B unless explicitly cleared to enter.

### Step 4: Exiting – Close DC SFRA Flight Plan

- Remain on frequency/squawk until ATC authorizes change; DC SFRA flight plan closes upon exiting the DC SFRA.

# Interception Procedures

---

## General

1. In conjunction with the FAA, Air Defense Sectors monitor air traffic and could order an intercept in the interest of national security or defense. Intercepts during peacetime operations are vastly different from those conducted under increased states of readiness. The interceptors may be fighters or rotary wing aircraft. The reasons for aircraft intercept include, but are not limited to:

- (a) Identify an aircraft;
- (b) Track an aircraft;
- (c) Inspect an aircraft;
- (d) Divert an aircraft;
- (e) Establish communications with an aircraft.

2. When specific information is required (i.e., markings, serial numbers, etc.) the interceptor pilot(s) will respond only if, in their judgment, the request can be conducted in a safe manner. Intercept procedures are described in some detail in the paragraphs below. In all situations, the interceptor pilot will consider safety of flight for all concerned throughout the intercept procedure. The interceptor pilot(s) will use caution to avoid startling the intercepted crew or passengers and understand that maneuvers considered normal for interceptor aircraft may be considered hazardous to other aircraft.

3. All aircraft operating in US national airspace are highly encouraged to maintain a listening watch on VHF/UHF guard frequencies (121.5 or 243.0 MHz). If subjected to a military intercept, it is incumbent on civilian aviators to understand their responsibilities and to comply with ICAO standard signals relayed from the intercepting aircraft. Specifically, aviators are expected to contact air traffic control without delay (if able) on the local operating frequency or on VHF/UHF guard. Noncompliance may result in the use of force.

## Fighter intercept phases

### 1. Approach Phase

As standard procedure, intercepted aircraft are approached from behind. Typically, interceptor aircraft will be employed in pairs, however, it is not uncommon for a single aircraft to perform the intercept operation. Safe separation between interceptors and intercepted aircraft is the responsibility of the intercepting aircraft and will be maintained at all times.

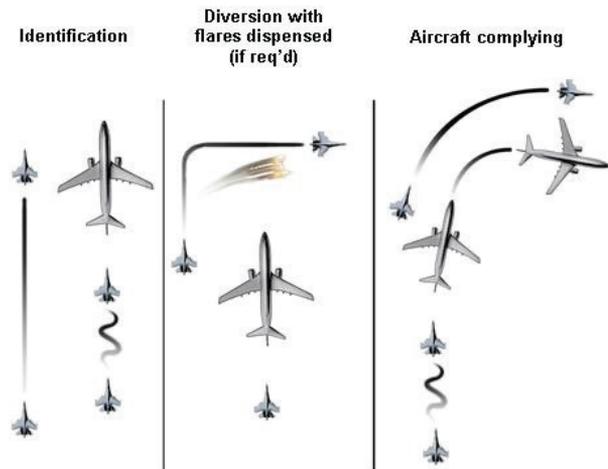

### 2. Identification Phase

Interceptor aircraft will initiate a controlled closure toward the aircraft of interest, holding at a distance no closer than deemed necessary to establish positive identification and to gather the necessary information. The interceptor may also fly past the intercepted aircraft while gathering data at a distance considered safe based on aircraft performance characteristics.

## Interception Procedures *(cont.)*

### 3. Post Intercept Phase

An interceptor may attempt to establish communications via standard ICAO signals. In time-critical situations where the interceptor is seeking an immediate response from the intercepted aircraft or if the intercepted aircraft remains non-compliant to instruction, the interceptor pilot may initiate a divert maneuver. In this maneuver, the interceptor flies across the intercepted aircraft's flight path (minimum 500 feet separation and commencing from slightly below the intercepted aircraft altitude) in the general direction the intercepted aircraft is expected to turn. The interceptor will rock its wings (daytime) or flash external lights/select afterburners (night) while crossing the intercepted aircraft's flight path. The interceptor will roll out in the direction the intercepted aircraft is expected to turn before returning to verify the aircraft of interest is complying. The intercepted aircraft is expected to execute an immediate turn to the direction of the intercepting aircraft. If the aircraft of interest does not comply, the interceptor may conduct a second climbing turn across the intercepted aircraft's flight path (minimum 500 feet separation and commencing from slightly below the intercepted aircraft altitude) while expending flares as a warning signal to the intercepted aircraft to comply immediately and to turn in the direction indicated and to leave the area. The interceptor is responsible to maintain safe separation during these and all intercept maneuvers. Flight safety is paramount.

*NOTE- During Night/IMC, the intercept will be from below flight path.*

# Interception Procedures (cont.)

## Helicopter Intercept Phases

### 1. Approach

Aircraft intercepted by helicopter may be approached from any direction, although the helicopter should close for identification and signaling from behind. Generally, the helicopter will approach off the left side of the intercepted aircraft. Safe separation between the helicopter and the unidentified aircraft will be maintained at all times.

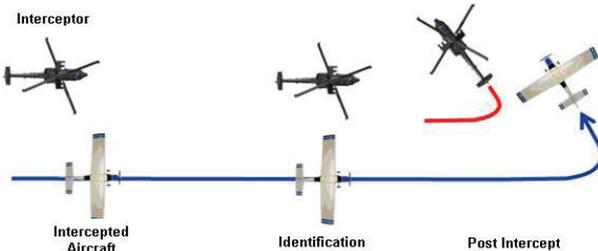

### 2. Identification

The helicopter will initiate a controlled closure toward the aircraft of interest, holding at a distance no closer than deemed necessary to establish positive identification and gather the necessary information. The intercepted pilot should expect the interceptor helicopter to take a position off his left wing slightly forward of abeam.

### 3. Post Intercept

Visual signaling devices may be used in an attempt to communicate with the intercepted aircraft. Visual signaling devices may include, but are not limited to, LED scrolling signboards or blue flashing lights. If compliance is not attained through the use of radios or signaling devices, standard ICAO intercept signals may be employed. In order to maintain safe aircraft separation, it is incumbent upon the pilot of the intercepted aircraft not to fall into a trail position (directly behind the helicopter) if instructed to follow the helicopter. This is because the helicopter pilot may lose visual contact with the intercepted aircraft.

## Helicopter Intercept Procedures

**NOTE:** Intercepted aircraft must not follow directly behind the helicopter thereby allowing the helicopter pilot to maintain visual contact with the intercepted aircraft and ensuring safe separation is maintained.

## Interception Procedures *(cont.)*

---

### Summary of Intercepted Aircraft Actions

An intercepted aircraft must, without delay:

1. Adhere to instructions relayed through the use of visual devices, visual signals, and radio communications from the intercepting aircraft.
2. Attempt to establish radio communications with the intercepting aircraft or with the appropriate air traffic control facility by making a general call on guard frequencies (121.5 or 243.0 MHz), giving the identity, position, and nature of the flight.
3. If transponder equipped, select Mode 3/A Code 7700 unless otherwise instructed by air traffic control.

*NOTE: If instruction received from any agency conflicts with that given by the intercepting aircraft through visual or radio communications, the intercepted aircraft must seek immediate clarification.*

4. The crew of the intercepted aircraft must continue to comply with interceptor aircraft signals and instructions until positively released.

### Visual Warning System (VWS)

The VWS signal consists of highly-focused red and green colored laser lights designed to illuminate in an alternating red and green signal pattern. These lasers may be directed at specific aircraft suspected of making unauthorized entry into the Washington, DC Special Flight Rules Area (DC SFRA) proceeding on a heading or flight path that may be interpreted as a threat or that operate contrary to the operating rules for the DC SFRA. The beam is neither hazardous to the eyes of pilots/aircrew or passengers, regardless of altitude or distance from the source nor will the beam affect aircraft systems.

- a. If you are communicating with ATC, and this signal is directed at your aircraft, you are required to contact ATC and advise that you are being illuminated by a visual warning system.
- b. If this signal is directed at you, and you are not communicating with ATC, you are advised to turn to the most direct heading away from the center of the DC SFRA as soon as possible. Immediately contact ATC on an appropriate frequency, VHF Guard 121.5 or UHF Guard 243.0, and provide your aircraft identification, position, and nature of the flight. Failure to follow these procedures may result in interception by military aircraft. Further noncompliance with interceptor aircraft or ATC may result in the use of force.
- c. Pilots planning to operate aircraft in or near the DC SFRA are to familiarize themselves with aircraft intercept procedures. This information applies to all aircraft operating within the DC SFRA including DOD, Law Enforcement, and aircraft engaged in aeromedical operations and does not change procedures established for reporting unauthorized laser illumination as published in FAA Advisory Circulars and Notices.

#### *Reference – CFR 91.161*

- d. More details including a video demonstration of the VWS are available from the following FAA web site: [www.faasafety.gov/VisualWarningSystem/VisualWarning.htm](http://www.faasafety.gov/VisualWarningSystem/VisualWarning.htm).

### Operation Instructions

- Purpose:
1. Real-time IFR departure coordination (clearance and release) with Tower/Approach.
  2. Cancellation of IFR flight plans when airborne cancellation is not possible.
- Restrictions:
- All aircraft utilizing the GCO must be on the ground, NOT airborne. Communications with Tower/Control are for IFR operations only.
- Procedures:
- IFR departures – When ready to taxi to active runway call Tower/Approach by four transmitter clicks (0.5 second clicks, pause one full second between clicks, etc.). When the facility answers, identify yourself by aircraft make, “N” number, and the information: “(make) N-XXXXX on the ground at HLX, ready to copy IFR clearance to \_\_\_\_\_; ready to taxi to the active runway.”
- Memorandum:
- The GCO/telephone call-up sequence can take up to approximately one minute.
- Communications after contact are VOX (voice operated), and simplex (only one party speaks at a time). A recommended procedure is to end your transmissions with “over”, and your last transmission with “(make) N-XXXXX, clear”.

# The Virginia Department of Aviation

---

The Virginia Department of Aviation is made up of the Director's Office and four divisions: (1) Airport Services, (2) Communications & Education, (3) Flight Operations and Safety, and (4) Finance and Administration. The Department administers applicable provisions of the Code of Virginia, plans for the development of Virginia's aviation system, promotes aviation, and licenses aircraft, airports, and landing areas. The Department provides financial and technical assistance to eligible sponsors for the planning, development, construction, and operation of airports and aviation facilities.

## DOAV Mission Statement

---

- Cultivate an advanced aviation system that is safe, secure and provides for economic development;
- Promote aviation awareness and education; and
- Provide flight services for the Commonwealth Leadership and State Agencies

## Director's Office

---

The Director's Office provides timely information to the Governor, Secretary of Transportation, the Virginia Aviation Board and citizens of Virginia relating to the Commonwealth's air transportation system. It is also accountable for the enforcement of aviation laws for the Commonwealth.

**Randall Burdette**, Virginia Department of Aviation Director 804-236-3625

## Airport Services Division

---

The planners and engineers in this division provide airport sponsors and managers with technical assistance on a wide range of projects and issues, including airport planning, environmental studies, design and construction of airport facilities, airport maintenance, and general aviation airport security. This division conducts statewide aviation planning and maintains the Virginia Air Transportation System Plan. It also issues licenses to airports.

**P. Clifford Burnette, Jr.**, Airport Services Director 804-236-3646

## Communications and Education Division

---

Promoting aviation in Virginia and projecting a positive image of the Department and the air transportation system is what this group of communicators does daily. They develop the agency's marketing plan, administer promotion and air service development grants for airports, and promote aviation in Virginia through aviation awareness and education programs, speaking engagements, briefing documents and trade shows. This division is responsible for government affairs, policy, and air service development in coordination with airport sponsors and local jurisdictions in an effort to enhance domestic and international air service. It monitors the impact of federal regulatory activity on the aviation system and serves as the legislative liaison for the Department. In addition, it is responsible for licensing aircraft in Virginia.

**Cherry A. Evans**, Communications and Education Director 804-236-3631

## Flight Operations and Safety Division

---

The Flight Operations and Safety Division is responsible for operating, maintaining and scheduling state-owned aircraft to provide safe, secure, and cost-effective transportation for all state agencies including emergency services, economic development prospects, and the Administration for the conduct of the Commonwealth's business. This division maintains a continuous safety program aimed at Virginia pilots in an effort to reduce the aircraft accident rate while monitoring and reporting aviation related accidents to the Virginia Aviation Board.

**Steve Harris**, Flight Operations and Safety Director 804-774-4638

## Finance and Administration Division

---

This division is responsible for providing financial and administrative support to the Department. These responsibilities include development and execution of the Department's budget, maintenance of official accounting records, procurement of and contracting for goods and services, the coordination of communication and information technology, and provision of human resource support.

**Roger L. Bowling**, Finance and Administration Director 804-774-4624

# Virginia Aviation Board

Members of the Virginia Aviation Board are appointed by the Governor to represent defined geographic areas of the Commonwealth. The Board provides a means of citizen access to the Department of Aviation. Functions of the Board include publicizing and monitoring policies and programs of the Department, promulgating regulations necessary to promote and develop safe aviation practices, and allocating funds to localities for aviation development.

# Virginia Aircraft Licensing Requirements

## Title 23 VAC 58-1

### § 5.1-5 Licensing of Aircraft.

Every resident of this Commonwealth owning a civil aircraft, every nonresident owning a civil aircraft based in this Commonwealth over sixty days during any twelve-month period and every owner of an aerial application aircraft operating within this Commonwealth or of a civil aircraft operated in this Commonwealth as a for-hire intrastate air carrier shall, before the same is operated in this Commonwealth, obtain from the Department an aircraft license for such aircraft.

### § 5.1-88.1 Proof of Financial Responsibility to be Furnished for Each Aircraft.

No aircraft as defined in § 5.1-1 (c) of article 1, chapter 1 of this title, except a public service aircraft, a balloon and a parachute shall be licensed by the Department unless and until the applicant thereof shall furnish proof of financial responsibility in the amounts required by this chapter for each aircraft for which a license is applied for.

### § 58.1-1502 Tax Levied.

A tax upon the retail sale of every aircraft sold in the Commonwealth and upon the use in the Commonwealth of any aircraft required to be licensed by the Department of Aviation pursuant to § 5.1-5. The amount of the tax to be collected shall be determined by the application of the following rate against the sale price or gross receipts:

1. Two percent of the sale price of each aircraft sold in the Commonwealth.
2. Two percent of the sale price of each aircraft not sold in the Commonwealth but required to be licensed for use in the Commonwealth. However, if the aircraft is licensed in the Commonwealth six months or more after its acquisition, the tax shall be two percent of the market value of such aircraft at the time it is licensed or two percent of the purchase price thereof, whichever is lower.
3. Two percent of the monthly gross receipts from the lease, charter or other use of any aircraft licensed for commercial use pursuant to § 5.1-5 (b) and held for sale by a dealer who has elected to be taxed under this paragraph as provided in § 58.1-1507.

For more information on aircraft licensing for the Commonwealth of Virginia, please contact the Department of Aviation at 804-236-3637.

## Virginia Aviation Ambassadors Program

---

The Virginia Aviation Ambassadors Program is designed to encourage pilots to fly (and/or drive) to all of Virginia's public use airports, visit aviation and transportation museums, and attend safety programs. It presents an extraordinary opportunity for pilots, aviation enthusiasts, and the general public to experience, as they pursue their program goals, the exceptional beauty and diversity that the Commonwealth of Virginia has to offer.

The program is open to both pilots and passengers. Participants need to obtain an official Virginia Aviation Ambassadors Passport from one of Virginia's public use airports. Each time the participant visits a qualifying airport, museum, safety seminar, or fly-in, upon presentation of the passport and a photo ID, they will receive a stamp in their passport. Only one stamp may be received for each visit and all stamps must be made in the appropriate location in the passport booklet.

Upon completion, the passport must be submitted to the Department of Aviation for review. There are three program levels that participants can achieve. Each recipient must visit four aviation museums, attend one FAA safety seminar, and an approved fly-in within the Commonwealth. Bronze level recipients must visit 25 of Virginia's public use airports including at least one from each of Virginia's seven regions (see Virginia Aviation Board, page 163-164, for the list). Silver level recipients must visit 50 airports. Gold level recipients must visit all 66 airports. Please note which level: Gold, Silver, or Bronze is being sought. Once a passport has been submitted and gift awarded, the passport will be returned to the participant so that he or she can continue to the next level.

*For more information about the Virginia Aviation Ambassadors Program visit the Virginia Department of Aviation's website: [www.doav.virginia.gov](http://www.doav.virginia.gov)*
