

APPENDIX A

A "Sponsor Survey Form" was sent to each of the 66 public-use airports. The forms compiled the information collected in the database which resulted in a customized form for each airport listing the airport's data. The categories included data related to airport classification, based aircraft and operations, facilities, equipment, safety, and planning efforts. Airport sponsors were emailed their individual forms and asked to review the existing data and add any data essential that was missing. Any changes or comments were noted in the column next to the category and assessed by the project team. The final database was used throughout the state system plan update. An unpopulated sample of the "Sponsor Survey Form" is outlined below.
